Replacement Abstract

ABSTRACT OF THE DISCLOSURE

An apparatus preventing odor from escaping the toilet bowl by generating a stream of bubbles to cover human waste by using liquid soap, air pump, and low volume water flow. The same system with higher water volume functions as a toilet bidet by using an elevated nozzle attached to the bubble dispensing tube. An additional component of the apparatus is a novel water inline adapter providing an extra, convenient way to create an additional easy water source for the stream of bubbles and the toilet bidet.
